Place Charles de Gaulle Simulation Model

New features, smarter modeling

The most recent AnyLogic 8.9.6 and 8.9.7 releases include a number of enhancements intended to make everyday modeling more effective and smoother.

These updates give you more flexibility to concentrate on insights rather than setup by reducing repetitive work with tools like a **new chart wizard**, **3D preview**, and **external Python scripting for markup creation**.

See the complete blog post to learn how these features and more can improve your modeling projects and save time.

Global security standards achieved

AnyLogic has earned ISO/IEC 27001:2022 certification, confirming its software and cloud services meet the highest international standards for information security.

This achievement demonstrates a strong commitment to protecting customer data and ensuring secure, reliable operations.

Releases, events, and milestones

AnyLogic's 2025 was a year defined by innovation and momentum. With major software and cloud updates, expanded training programs, and a successful global conference, we strengthened our position as a leader in simulation modeling.

The year also brought industry recognition and ISO certification, while our community of users continued to showcase inspiring projects and real-world applications.

Explore the full blog post to see these and other milestones that made 2025 a breakthrough year for AnyLogic.

Model of the month:

This model simulates the Place Charles de Gaulle roundabout in Paris, capturing its many approaches, heterogeneous flows, and unconventional priority rules. Exit choices are weighted by the number of lanes, while traffic-signal control for opposing approaches is tested to analyze performance under varying demand scenarios and control strategies.
